Mon, 14 Jan 2019 08:06:00 GMT Introduction to Differential Equations - Introduction to basic principles of fluid mechanics I. Flow Descriptions 1. Lagrangian (following the particle): In rigid body mechanics the motion of a body is described in terms of the body's position in time. This body can be translating and possibly rotating, but not deforming. This description, following a particle in time, is a Lagrangian description, with velocity vector $\mathbf{v} = v_x \mathbf{i} + v_y \mathbf{j} + v_z \mathbf{k}$... Principles and ... - The scheme is Lagrangian and Hamiltonian mechanics. Its original prescription rested on two principles. First that we should try to express the state of the mechanical system using the minimum representation possible and which reflects the fact that the physics of the problem is coordinate-invariant. Second, a mechanical system tries to optimize its action from one split second to the next ... This is the first part of the
total paper. Since the theory
of partial differential
equations (PDEs) has been
established nearly 300
years, there are many
important problems have
