Structure.pdf | Deep ... - 1.

Introduction. Soil quality is
one of the three components
of environmental quality,
besides water and air
quality (Andrews et al.,
2002). Water and air quality
are defined mainly by their
degree of pollution that
impacts directly on human
and animal consumption
and health, or on natural
ecosystems (Carter et al.,
1997, Davidson, 2000).

Soil quality â€œ A critical
review - ScienceDirect - ii
Some environmental issues
are largely of local
significance while others
have regional or even
global relevance. At the
personal or household level,
there are a host of actions
that people can take to A
Perspective on
environmental
sustainability -
